Art Unit: 3622

DETAILED ACTION

1. Mr. Dichiara informed the examiner that the notice of appeal was filed in error.

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-16 are drawn to time stamping the receipt of completion tasks and the analysis of timing information, classified in class 705, subclass 50.
- II. Claim 17 is drawn to a competition in which contestant responses are analyzed to create a specific user profile, classified in class 705, subclass 10.
- III. Claim 18 is drawn to a scoring technique in which a signature indicates the contestants' responses, classified in 705, subclass 75.
- 3. Inventions of group I and groups II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group I has separate utility such as time stamping the receipt of completion tasks and the analysis of timing information.

 This separate use patentably distinguishes the invention of group I from groups II, III, since the time stamping the receipt of completion tasks and the analysis of timing information is not a limitation of those other independently claimed inventions. The stamping the receipt of completion tasks and the analysis of timing information shows that the invention of group I is separately usable from the inventions of groups II, III. Therefore the invention of group I is a separately usable subcombination.

Application/Control Number: 09/536,518

Art Unit: 3622

See MPEP § 806.05(d).

4. Inventions of group II and groups I, III, are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group II has separate utility such as creating a user profile. This separate use patentably distinguishes the invention of group II from groups I, III, I since the feature of creating a user profile is not a limitation of those other independently claimed inventions. The creation of user profile shows that that the invention of group II is separately usable from the inventions of groups I, III. Therefore the invention of group II is a separately usable subcombination. See MPEP § 806.05(d).

Page 3

- 5. Inventions of group III and groups I, II, are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of group III has separate utility such as creating a unique signature. This separate use patentably distinguishes the invention of group III from groups I, II since the feature of creating a unique signature is not a limitation of those other independently claimed inventions. The creating a unique signature feature shows that the invention of group III is separately usable from the inventions of groups I, II. Therefore the invention of group III is a separately usable subcombination. See MPEP § 806.05(d).
- 6. Since the restriction is complex and examiner knows from past experience that an election will not be made by telephone, this restriction is proper under MPEP 812.01.
